KPrinter Suite

KPrinter Suite is a comprehensive document management system for SWIFT messages. The core components of KPrinter seamlessly integrate with SWIFT Applications on one end and Banking Application on the other End.

The Suite is modular in design and allows a user to select those modules that are of interest to them. The Modules are;

KPrinter – PDF Maker for SWIFTAlliance/Entry

This application is tailored for SWIFT Alliance Access/Entry Users who would like to view in detail, their SWIFT traffic (messages).

KPrinter – Auto-E-Mailer.

Customized tool for institutions to send copies of SWIFT messages using email automatically to pre-defined destinations.

KPrinter- STP

A module to process selected incoming/outgoing messages such as MT 103 and MT 202 and upload them to banking application/SWIFT Alliance.

KPrinter – Spooler

This module is an application that enables the user bank to set up automatic printing of messages of particular types to selected printers.

KPrinter -AML

This version checks all outgoing and incoming SWIFT financial messages against the database containing names of all Suspected Entities and alert the compliance officer.

Key Advantages

Less Paper

PDF document is in softcopy format. This implies less paper usage as users print them when necessary.

Extended reporting

When the messages are in PDF form they may be stored for indefinite periods and can be shared among several individuals faster electronically.
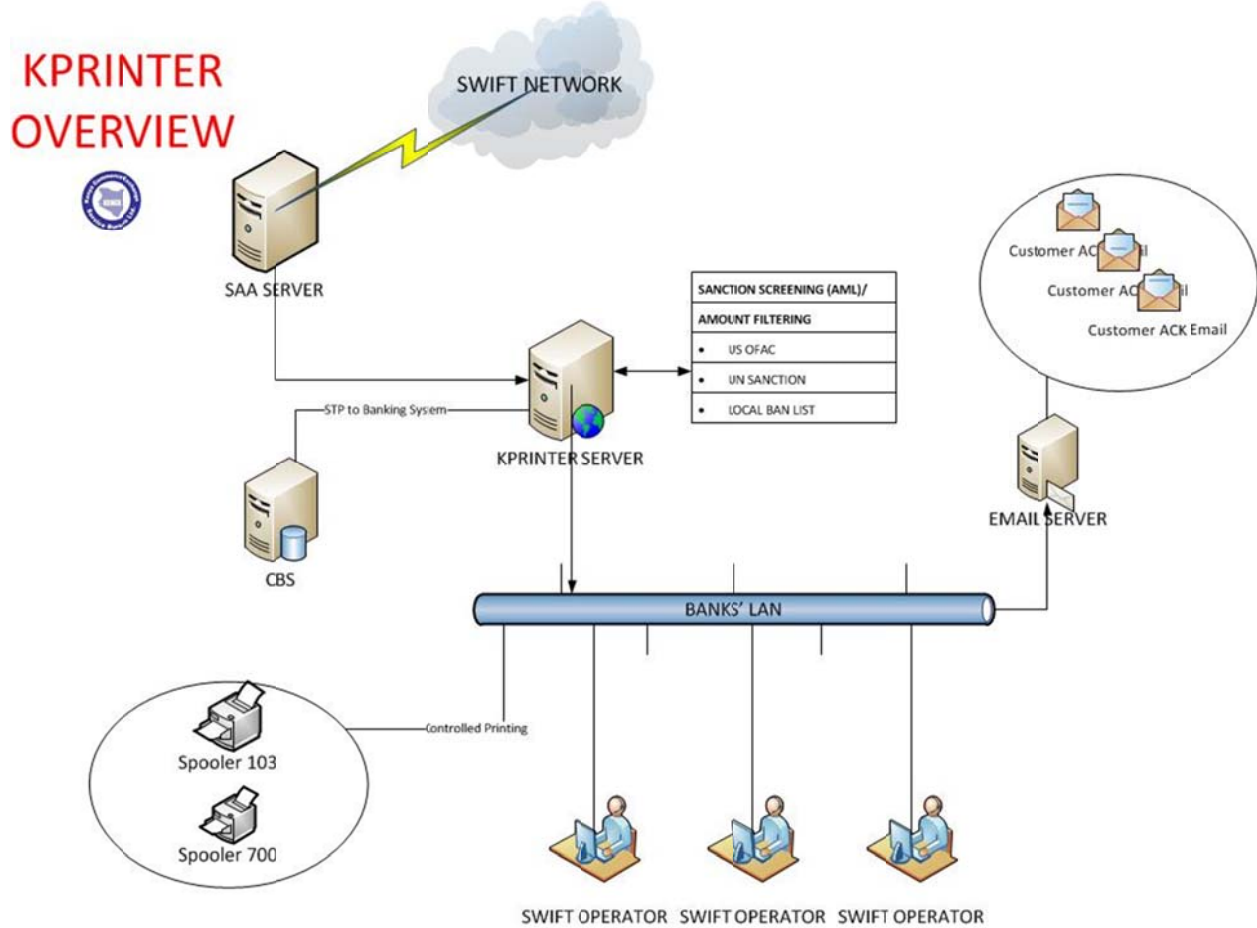

Summarized Messages

It's easier to search and index all the messages as they are summarized (grouped) into separate directories.

Auditing and Customer Notifications

Auditors can find this application useful as it twice simplifies their work of tracking transactions by browsing specific message directories. A powerful Search Screen enables easy tracking of messages based on one or several parameters.
